Laser Cutting Machine

The high-speed precision laser cutting machine is ideal for various applications, including metal and nonmetal materials.

Levelling part

The levelling part ensures accurate cutting by adjusting the machine's position to maintain consistent results.

Fully enclosed laser cutting

The enclosure provides a safe environment for operators and protects the cutting area from dust and debris.

Automatic unloading material

An automatic unloading system removes the cut material, ensuring a clean and efficient operation.

Machine Advantage

- High-speed cutting: The machine can handle large quantities of material efficiently.
- High precision: Consistent results are achieved with minimal errors.
- Automatic unloading: Saves time and reduces manual labor.

Industry Applications

- Metal fabrication: Ideal for creating precise cuts and shapes in metal parts.
- Plastic cutting: Suitable for precision cuts in plastic materials.
- Woodworking: Can be used for intricate cuts in wood.
